dokimo.ai

Agentic compliance
Workers for cross-system validation

Most tools tell you if controls exist. Dokimo tells you if they actually work.

Company Purpose

Agents that do the compliance work.

Starting with the gaps between systems.

Every system says its own controls work. Dokimo's agents validate across all of them and draft the fix in minutes, not months. We sell the work, not another tool.

Problem

Every risk dashboard is green.
The bank is still exposed.

$1.7B

in penalties in 10 weeks

August 3 to October 13, 2026

UBS

$125M

FinCEN penalty, August 2026

A labeling change hid a third of its wires from monitoring.

American Express

$350M

OCC penalty, October 2026

Monitoring missed suspected laundering for almost 11 years.

Bank of America

$1.2B

FinCEN and OCC, October 2026

Knew for years suspicious activity wasn't escalated. Didn't fix it.

So validation is manual, wrong, and can't keep up.

Sources: FinCEN, August 3, 2026; OCC, October 2026. Bank of America's $1.2B is FinCEN's assessment, which credits the OCC's $750M penalty.

Why Now

How we got here

1. Compliance began as paper binders, spreadsheets, manual sign-off.
2. GRC platforms digitized it, but each system still only proves compliance within its own framework.
3. RegTech point tools added detection: more alerts, more false positives, still human-cleared.
4. No incumbent is incentivized to fix it. Every GRC and point-tool vendor earns inside its own silo, never across competitors' systems.

Why now

Agents can now do the intelligence work

Reconciling systems against the rules and drafting the fix is work AI now does end to end. People keep the judgment.

Regulators are fining banks for monitoring and data gaps

UBS, American Express and Bank of America (2026), and TD Bank and Citi (2024) were all penalized over monitoring or data gaps.

Banks already pay consultants for this work

The budget exists and the scope is clear. Cost pressure rules out adding headcount.

***Where this goes:* every control at every regulated company validated continuously by agents, not sampled once a year by people. Dokimo is the layer that does it.**

Solution

Dokimo's agents find where a bank is out of compliance and draft the fix.

They work on top of the systems banks already run (Archer, Actimize, Regnology) and do the checking analysts and consultants do by hand. People make the final call.

WHAT THE AGENTS CATCH

- **AML:** Live loans for customers who never cleared KYC.
- **Compliance:** Policy reviews that no system ever triggers.
- **Reg reporting:** Filings that don't tie back to the ledger.

WHEN A NEW RULE DROPS

FDIC refreshed most of its Trust Examination Manual in October 2025.

Today, banks spend weeks reviewing every affected policy by hand.

Ask Bob, Dokimo's orchestrator agent. It redrafted the affected policy in minutes, and Guidehouse confirmed it was correct.

Dokimo Does the Work

Six of Dokimo's 20+ agents, each doing a job analysts and consultants do by hand today.

TODAY

Analysts and consultants

4–6 weeks

Regulation review, by hand

1. Track regulatory changes by hand
2. Reread every policy against the rules
3. Match records across systems in spreadsheets
4. Check each control, one sample at a time
5. Draft the remediation
6. Assemble the evidence and citations

→

WITH DOKIMO

Dokimo's agents

3m 59s

Same review, run by Bob

Regulation Tracker watches 380 frameworks for change
Policy Analyst reads every policy against the rules
Data Reconciler matches every record across systems
Control Validator checks that each control actually works
Remediation Drafter drafts the fix for each gap
Evidence Keeper keeps the citations and lineage

50–80%

of analyst and consultant work done by Dokimo's agents

Continuous

validation runs all the time, not once a year after the fact

Every record

checked across the connected systems, not sampled one at a time

Product

One orchestrator, 20+ specialist agents, 380 frameworks. Runs in Dokimo's cloud or inside the bank.

HOW IT WORKS

Bob, the orchestrator

Splits each request across 20+ specialist agents, runs them in parallel and returns one answer with its evidence.

WHAT IT DELIVERS

Exam-ready evidence

Every gap found, the fix drafted, and the evidence packaged with citations and lineage.

WHERE IT RUNS

Cloud or on-prem

Dokimo's cloud on Kubernetes and Kafka, or inside the bank as a Docker image from a scanned private registry.

IP

2 patents pending

Agent Swarm and Tri-Persona Orchestration (provisional filings).

Roadmap

Year 1, now (beta)

Supervised: validate across systems

Agents do the work; people make every decision. 20+ agents, 380 frameworks, financial services. In beta; GA for mid-size banks Q4 2026, large banks 2027.

Year 2 (planned)

Semi-supervised: routine calls

Agents make routine calls; anything regulators reserve for people is prepared for approval. Model router, real-time streaming.

Year 3+ (planned)

Unsupervised: predict risk

Where regulators and customers allow it, agents decide. Predictive risk scoring, federated learning, open API.

The three modes run side by side, process by process, and move only as fast as regulators and customers allow.

Bob at Work

Live in beta. A compliance lead asks in plain English; Bob returns the gap, the statute and the fix.

THE QUESTION

Run a 30-day Gap Analysis on failing control CME Clearing SPAN 2 & Variation Margin SLA Compliance, cite governing regulatory standards, and outline 3 priority remediation steps.

Emmett (NL2SQL): Mapping query intent to regulatory data fields & compliance metrics... 22s

Bob splits the work across specialist agents and shows each step. Here, Emmett maps the question to the bank's data.

BOB'S ANSWER (EXCERPT)

Analysis complete 59s 05:16 PM

SEVERITY	STATUTORY CITATION	RECOMMENDED POLICY REDRAFT CLAUSE
Critical	**CFTC Part 39, 17 CFR § 39.13(g)(1), (g)(8), § 39.14(a),(b),(c)** (DCO obligations which clearing members must adhere to via DCO rules); **OCC Bulletin 2013-29 (Heightened Standards), Appendix A, I.A.1, I.A.4** (Risk Governance Framework, Risk Management); **OCC Bulletin 2014-12** (Third-Party	**The Bank shall establish, maintain, and rigorously enforce policies and procedures to ensure 100% compliance with all CME Clearing house SLAs for SPAN 2 initial margin and variation margin calls, both intraday and end-of-day. This includes daily verification of calculation accuracy, timely settlement, and robust liquidity management to prevent any settlement defaults. The bank's risk management framework**

59 seconds

From question to a cited gap analysis: coverage, severity, the statute and the fix.

Cited to statute

Each requirement ties to the rule, here CFTC Part 39 and OCC Bulletins 2013-29 and 2014-12.

Fix drafted

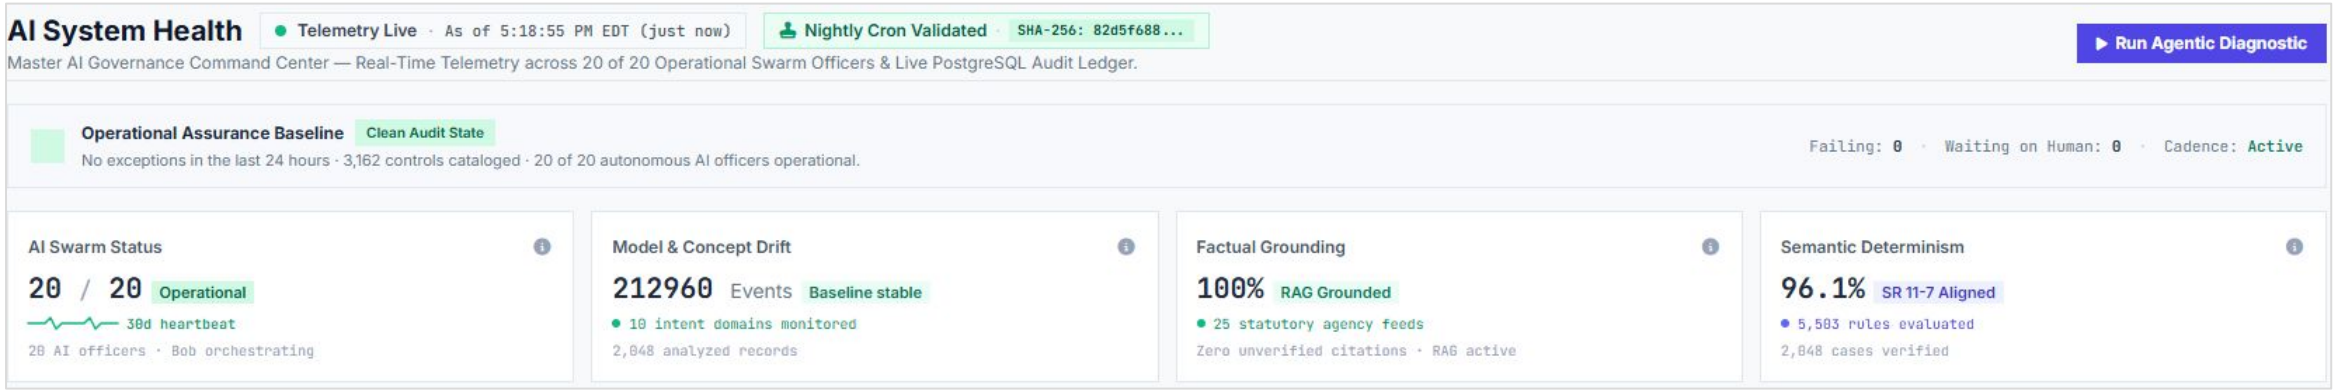

A policy redraft, ready for the bank's review. People make the final call.

Beta environment, demo data. Bank name anonymized.

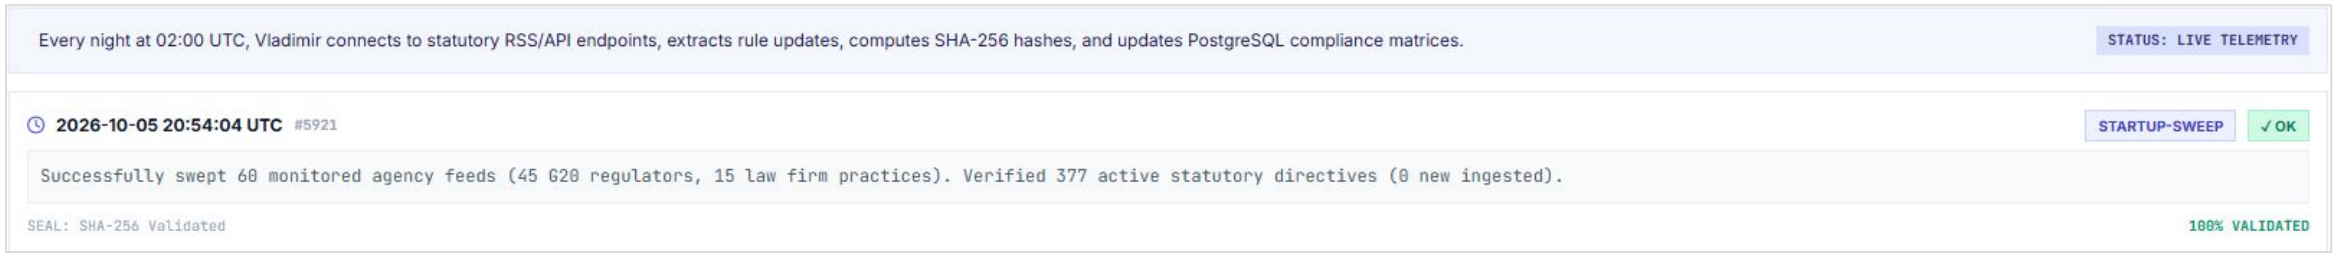

Every Agent, Watched

What a bank's model-risk team can inspect at any time: each agent's health, drift and grounding, plus the nightly rule sweep.

AI SYSTEM HEALTH

NIGHTLY REGULATORY SWEEP

Grounded

Each finding ties to a source; unverified citations are flagged before anyone relies on them.

Drift watched

Model and rule drift are tracked against a baseline, around the clock.

Sealed

Regulatory feeds are swept nightly; records are hashed (SHA-256) and kept write-once.

Beta environment.

Defensibility

Why we win, and why an AI skeptic can trust it inside a bank.

IF THE AI IS WRONG?

Trustworthy by design

- Three AI personas (compliance, risk officer, technologist) review key findings; Bob reconciles where they disagree. Patent pending.
- Every finding sites a record and a rule, or it is flagged as inference. Rule drift is monitored.
- Autonomy only as regulators allow. Full reasoning trail on every call.

WHY THIS TEAM?

Built by insiders

- We led the platforms banks run today: SymphonyAI (Ayasdi, NetReveal), Napier, RiskCanvas.
- We know where the gaps are. We ran the tools that leave them.
- We know how the regulator thinks (ex-FINRA, bank compliance leaders).

WHO SELLS IT?

Consultants and our own team

- Channel: Guidehouse (writing Dokimo into client bids) and KPMG (managed services). Both agreements in legal review.
- Direct: our enterprise team sells to the CRO.
- Partners bring about 40% of banks, so we grow without a large sales team.

WHAT STOPS A FAST FOLLOWER?

It gets stickier

- The more systems Dokimo connects, the more manual work it replaces, one division at a time.
- Each bank's system mappings and tuned thresholds live in Dokimo. A replacement starts from zero.
- Removing Dokimo means re-adding the people and reviews it replaced.

Competition

Every alternative is periodic, siloed or limited to one domain. Dokimo runs continuously, across all of them.

Manual reviews	Big Four and boutique firms, internal analysts	Periodic and sampled, out of date the day they're delivered.
Banks' own AI teams	Copilots on in-house LLM platforms	Built for one team's workflow. Validation should be independent of the teams that built the systems.
GRC & compliance systems	Archer, MetricStream, Actimize, Regnology	Each tracks controls inside its own silo. Analysts still do the checking.
Agentic point tools	Bretton AI, WorkFusion	Agents that clear alerts and KYC reviews in one workflow. They don't check whether the systems agree.
Control testing	Cable	Automated financial-crime control testing, mostly for fintechs and smaller banks. One domain.
Norm AI	$260M+ raised, $1.2B valuation, Khosla-led	AI-native legal work. Interprets the rule; doesn't validate the bank's systems.

Dokimo: validates across every system and framework at once, replacing the periodic manual reviews banks buy today. Consultancies become our channel, not our competition.

Market Size

The market is what regulated firms spend on people doing compliance work. Not the GRC software budget.

Total addressable market (TAM)

$180B

What firms pay people to do compliance work, all industries, worldwide.

Serviceable addressable market (SAM)

$1B

4,880 banks, credit unions and broker-dealers.

Serviceable obtainable market (SOM)

$15.2M

57 institutions by year four, direct and through partners.

$0.3B

the floor

One division at every firm is the floor. More lines of business get us to $1B.

Banks have retail, commercial, cards and wealth. Price is $50K to $100K a year per division. Sell first: 1,388 US banks over $1B and larger broker-dealers.

Sources: BLS OEWS and ECEC; LexisNexis (2023); FDIC, NCUA, FINRA and ECB counts. Prices and divisions per firm are Dokimo plan.

Business Model

Revenue model	Service-as-software: we sell the work, not seats. Every outcome (a KYC review, an alert triage, a cross-system check) carries a published credit weight. **North star:** credits consumed, the compliance work our agents complete.
Pricing	About $100K a year per division, $50K at community banks. Each division includes credits and unlimited users, and banks add divisions over time: two at community banks, up to ten at the largest. 12-month terms after a free 14-day proof of value. Partners license per engagement ($20K).
Margins	**~74% gross margin in Year 1, 85% by Year 3 (modeled).** Customers who run Dokimo in their own cloud pay their own AI and hosting costs.
How we sell	Direct to the CRO and the heads of Compliance and Audit. Consultancies run engagements on Dokimo or offer it as a managed service (~$120–240K ARR per client); technology partners embed it. **Sales cycle: 3–9 months.**
Time to value	**Value in the first hour.** A gap analysis that costs $250K and 6 weeks from a consultant takes about an hour on Dokimo, review included. The free 14-day proof of value runs on-prem or in our cloud.

Traction & Pipeline

Pre-revenue, in beta. Three proofs of value in motion, eight banks in the direct pipeline, and two partner agreements in legal review.

8
institutions in the direct pipeline

3
proofs of value in motion: Standard Bank, Synchrony, Old National

2
partner agreements in legal review: Guidehouse and KPMG

CHANNEL PARTNERS

Guidehouse: writing Dokimo into client bids; usage agreement in legal review.
KPMG: wants Dokimo in its managed services, where clients ask for $400K–$800K AI compliance projects. Agreement in legal review.
Moody's: stage three, now with product management.
ABeam: Japanese banks in the US and APAC; AI-team intro in Japan under way.
Earlier stage: Wolf (community banks and broker-dealers, just starting), a regulatory-reporting vendor (US resale talks) and K2 Integrity. Nothing signed.

DIRECT PIPELINE

Standard Bank (South Africa) proof of value in legal review
Marqeta CRO and CCO pitching it to corporate
Raymond James reviewing proposal
Synchrony Bank proof of value being finalized
Old National Bank proof of value being finalized
CME Group demo to the CCO
Monex direct to CCO
Regions Bank re-engaging after launch

Path to Scale

Land one division. Become the system it relies on. Replicate across the bank.

LAND

~$145K / bank

One division to start and a second soon after, at $50K to $100K each.

→

EXPAND

~$300K / bank

More divisions, say wealth after retail, within 12 to 18 months. Each division is a separate sale.

→

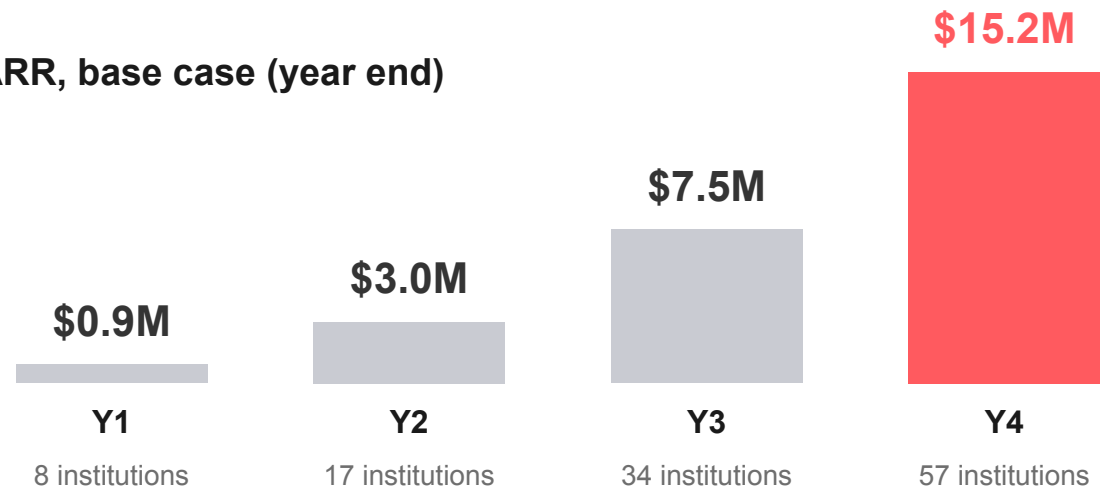

REPLICATE

$1M / bank

Divisions buy independently, international ones included, so ten make a $1M account at $100K each.

Partners bring about 40% of banks: *Guidehouse and KPMG, agreements in legal review. Managed-service clients (~$120–240K ARR each) are upside.*

ARR, base case (year end)

Upside not in the base case

The UK, the rest of the euro area, MSBs, partner managed services and other regulated industries.

Base case: *year-end ARR. Year 4 is 35 direct accounts at $305K plus 22 partner accounts at $205K net, 57 institutions in all. Price is $50K to $100K a year per division, and accounts grow from one or two divisions to several.*

Team

Operators who led the compliance platforms banks already use. Senior engineers in Belfast are in talks to join at close.

Warren Zafrin

Founder & CEO, leads engineering

Former CTO of Ayasdi (now Sensa/NetReveal under SymphonyAI) and Napier AI, financial-crime platforms used by global banks. Partner at Deloitte and inventor of RiskCanvas.

Leo Spiegel

Chairman

Advises founders on capital, boards and exits. Co-founder of LANSystems (sold to Intel and R.R. Donnelley), CEO of Sandpiper Networks, President of Digital Island, founding team at Pivotal. Runs Spiegel Capital Management.

Pat Tobin

Head of Product

Built and ran FINRA's intelligence programs supervising 3,300+ broker-dealers over 11 years. 15 years in risk consulting (BearingPoint, EY, SunGard). Teaches ERM at Columbia.

Bernie Vogel

Head of Marketing

Market Growth Leader for financial services at North Highland. 30 years opening accounts and building client relationships at Bank of America, Nomura and Deloitte.

Joseph Spector

Head of Sales

Enterprise compliance sales leader with direct experience across 9 of the top 10 Wall Street firms. Head of Sales at Safe Banking Systems until its acquisition.

Steve Goldberg

Customer Success

30+ years leading AML and compliance at Morgan Stanley, BofA Merrill Lynch, Crowe, and Baker Tilly. Track record of high-profile sanctions and forensics engagements.

Rick Small

Advisor

Former EVP, Director of Financial Crimes at Truist. Led financial-crime programs at Truist, American Express, Citigroup and GE Money. Ran Federal Reserve enforcement for 12 years. Senior Advisor at Oliver Wyman.

Jack Sonnenschein

Advisor

Former Chief Auditor, Compliance and AML at Citi and Global Head of AML Audit at BNY Mellon. Built Amex's enterprise compliance risk program. Founder of Compliance Navigation.

Roger Walton

Advisor

20+ years in enterprise sales and P&L leadership across HP, IBM, Actimize, and Triple Point. Currently CSO & CRO at Resistant AI.

Ask

Raising $4M seed to turn our pipeline into paying banks and harden the product for large banks.

$0.9M

ARR at end of Year 1

8 institutions, direct and through partners

3

Proofs of value in motion

Standard Bank, Synchrony, Old National

GA

Mid-size banks, Q4 2026

Large banks in 2027; 24-hour support

Use of funds A third builds the product. 42% sells and supports it.

33%

Engineering and AI research

Belfast engineers, AI researchers, SOC 2

15%

Sales and partnerships

Two senior sellers, AI SDR, events

14%

Customer success

Onboarding engineers, support, hosting

13%
